# Object Oriented Programming with Python

Gramsci Hermozo

Session 15

## Content

- Service to test
- Design Patterns (Abstract Factory)
- SOLID
- Practice

### Service to test

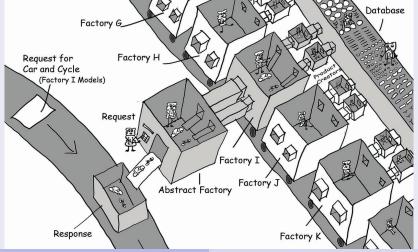

#### Flask

```
Is a micro web framework written in Python.
# Example code to show a "Hello World"
from flask import Flask
app = Flask(__name__)
@app.route("/")
def hello():
    return "Hello World"
if __name__ == "__main__":
    app.run(debug=False)
```

## Design Patterns

### **Abstract Factory**

Is a creational design pattern that lets you produce families of related objects without spedifying their concrete classes.

## **SOLID**

- S -> Single responsability
- O -> Open and Close (open for extension but closed for modification)
- L -> Liskov Substitution
- I -> Interface Segregation
- D -> Dependency Inversion

## **Practice**

### Lets use the good practices

Try to implement/refactor an Abtract Factory into Pandemic project
